DETAILED ACTION

Respond to Preliminary Amendment

1. This office action is in response to the preliminary amendment file on 7/19/04.
 - Claims 1-60 have been cancelled.
 - Claims 61-133 are newly added.
 - Claims 61-133 are pending in the application.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 61-133 rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-60 of U.S. Patent No. 6,693,837. Although the conflicting claims are not identical, they are not patentably distinct from each other because the elements recited in claims 61-133 of the present application are art recognize equivalent with claims 1-60 of U.S. Patent No. 6,693,837.

Art Unit: 2818

With regard to claims 61-133, the present application recited a refresh transition system comprising refresh controller, which is a mere broader version of the refresh transition system disclose in claims 1-60 of U.S. Patent No. 6,693,837. The purpose of the refresh transition system is to reduce time consumption to provide fast and efficiently refreshing system for a DRAM.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Kumanoy et al. (4,984,210) disclose a semiconductor memory device improved externally designating operation mode.
